

**Biogas valve train**

**Introduction of fuel delivery system - biogas valve train**

The biogas delivery system-biogas valve train mainly includes gas solenoid valve, gas filter, leak detector, pressure switch, gas regulator valve, gas pressure gauge, gas reducing valve, etc. It is developed by our R&D through the analysis of fuel properties and various investigations on the field and the high-tech calculation of various data. Various valves are purchased by well-known enterprises at home and abroad, and customers can specify foreign brands of different valves, we can match our burner by design. Biogas valve actuators are: SIMENS valve actuator and positioner; Biogas overpressure regulation valve/filter: MADAS of Italy, DUNGS of Germany, GIULIANI ANELLO of Italy, Krom/Schroder of Germany, FIORENTINI of Italy; Gas leak detection devices include: SIMENS gas leak detector, DUNGS gas leak detector, WEISHAUPT gas leak detector, HONEYWELL gas leak detector and Krom/Schroder leak protector. Gas pressure switches are: DUNGS pressure switch, Krom/Schroder pressure switch, HONEYWELL pressure switch; Gas solenoid valves/electric valves: DUNGS, BRAHMA, SIMENS, HONEYWELL gas solenoid valves, GIULIANI ANELLO, Krom/Schroder etc.

**Brand for imported material**
